

## GlobalFlow GmbH

POINT (9.2137301 48.4928357)

Less waste means less expenditure. From this successful formula benefit companies, which make their processes efficient, reuse recyclables and dispose waste appropriate. In this case, you are supported by GlobalFlow, a specialist in waste and resource management. What is special: GlobalFlow analyzes not only the disposal situation, but the complete material stream. Through the holistic approach, a maximum of potential savings is revealed. While valuable materials are led back possibly in circulation, a win-win situation originates: manufacturers save costs and help at the same time the environment.

Mechanical engineering, textile producer or food manufacturer - because no two companies are alike, GlobalFlow develops tailor-made concepts. For this the consulting company has already received several awards, among them the Darboven IDEE Prize in 2013 for pioneering business ideas. With partners in more than 17 countries GlobalFlow has international know-how and implements projects across the national border.
